FAQ

.04.2. Headless v1.8.5 (review) "Download Screenshot Help us translate this project! This project provides the Pintos vscode extension to directly connect to authentication providers. Install You can install from vscode: titel: Install Rauchen: install Aufrufen: install These commands are only available on Windows. Usage To use the Pintos authentication provider you first need to install Pintos. Pintos contains an extension and a vscode user interface. To use the Pintos extension you need to start VSCode with the following argument: "launch.json" "server.id_provider": "pintos", "server.id_provider_alias": "pintos" "server.authentication_command": "pintos" "server.authentication_password": "YourPassword" In vscode it can be triggered by right-clicking on the Pintos icon and clicking "Connect to..." To use the Pintos UI you need to open the Settings page and click on the "server" tab. You can click the "Connect to..." button to connect. You can also start VSCode with the following arguments: In the UI you can click the "Connect to..." button to connect. Manual These sections show the manual for the extension. Commands CMD Command Description Auto-connect Connects the authentication provider (if it is possible) or closes VSCode if no provider can be connected. CONNECT_CONFIGURATION Connects the authentication provider (if it is possible) with the following parameters: server.authentication_command - The command used to connect to the authentication provider. This command must be enabled in your configuration. - The command used to connect to the authentication provider. This command must be enabled in your configuration. server.authentication_password - The password for the authentication provider. - The 82157476af
